

NEW Aesthetic Bondable Button

Discover CDB's latest appliance - *the round bondable button*.

Constructed from tooth colored polyurethane material the new round button is intended to work lingually, labially as well as an auxiliary aid for clear aligners. The small round shape was designed to deliver powerful performance with exceptional comfort.

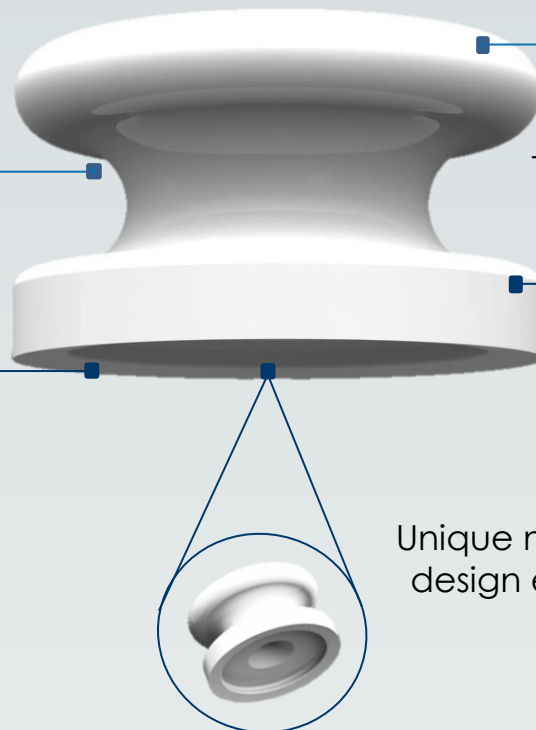

Ample tie wing area accepts and retains elastics applied from any direction

Smooth, rounded surface for exceptional patient comfort

Tooth colored composite material for enhanced aesthetics

Small size of base fits any tooth

Unique mechanical base design ensures a secure, optimized bond

With its small round shape and low profile design the round bondable button facilitates bonding in hard to reach areas. The tooth colored appearance makes it the perfect utility button for all aesthetic appliances.
